DETAILED ACTION

Election/Restrictions

1. Newly submitted claims 78-93 directed to an invention that is independent or distinct from the invention originally claimed for the following reasons:

Inventions I, "varying the size of a plurality of icon images displayed in a display device based upon a user preference value" (claims 3, 8, 13, 27-29, and 56), and II, "displaying a plurality of icons that respectively represent file system objects that can contain one or more items" (claims 78-93), are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I has separate utility such as "designating a user preference value for each of the selected icons". In the instant case, subcombination II has separate utility such as "a plurality of icons that respectively represent file system objects that can contain one or more

Art Unit: 2174

items", and "assigning relative display sizes...based upon the number of times contained" (claim 78) or "upon the amount of memory required to store said objects" (claim 80). See MPEP § 806.05(d).

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 78-93 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

Allowable Subject Matter

2. Claims 3, 8, 13, 27-29, and 56 are allowed.

3. The following is a statement of reasons for the indication of allowable subject matter: Claims 3, 8, 13, 27-29, and 56 teach the specific equation of $(\text{max}-\text{min})/(\text{N}-1)$ wherein N is the number of applications given a preference, min is the minimum icon size, and max is the maximum icon size. Nowlan discloses a minimum and maximum size for icons (fig. 8) but fails to provide a preference for the number equation as taught by the Applicant. McComb (U.S. Patent 6,111,573) teaches dynamic sizing according to content (col. 7, lines 10-20) but fails to provided a specific sizing formula as taught by the Applicant. Morgan teaches dynamically adding icons (col. 2, lines 35-42) and

Art Unit: 2174

container control (col. 1, lines 45-50) but fails to teach icon sizing as taught by the Applicant. Grossman teaches icons disappearing and reappearing based on usage (fig. 8 and 10). Grossman can be interpreted as a type of growing and shrinking. Grossman fails to teach use of a maximum and minimum formula based on number of applications as taught by the Applicant.

Response to Arguments

4. Applicant's arguments, see pgs. 12-14, with respect to claims 78-93, are directed to non-elected claims, and are therefore moot.
